Lecture 3
Comparative Advantage
and the Gains from Trade

Part 1: Multiple Choice

Select the best answer of those given.

1. According to the theory of comparative advantage, which of the following is not a reason why countries trade?
   a. Comparative advantage.
   b. Costs are higher in one country than in another.
   c. Prices are lower in one country than in another.
   d. The productivity of labor differs across countries and industries.
   e. Exports give a country a political advantage over other countries that export less.

   Ans: e

2. Which of the following statements would a mercantilist not agree with?
   a. Imports are desirable.
   b. Trade is a zero-sum activity.
   c. The purpose of trade is to amass revenues from exports.
   d. A country can benefit by granting monopoly rights to individuals.
   e. Policies should promote exports and discourage imports.

   Ans: a

3. If all prices in one country (country A) are higher than all prices in another country (B) when compared at the wage rates that happen to prevail in the two countries, and if the countries share the same currency, then if the nominal wage rate in country B remains fixed
   a. The nominal wage rate in country A will have to fall.
   b. Unemployment must be higher in country B than in country A.
c. The real wage in country A must be higher than in country B.
d. Workers in country A must be less productive than workers in country B.
e. Trade cannot be beneficial for country A.

*Ans:*  

4. According to the theory of comparative advantage, a country will export a good only if

a. It can produce it using less labor than other countries.
b. Its productivity is higher in producing the good than the productivity of other countries in producing it.
c. Its wage rate in producing the good is lower than in other countries.
d. Its cost of producing the good, relative to other goods, is at least as low as in other countries.
e. All of the above.

*Ans:*  

5. Suppose that Austria and Belgium have the unit labor requirements for producing steel and brooms shown in the table at the right. Then

<table>
<thead>
<tr>
<th>Good</th>
<th>Steel</th>
<th>Brooms</th>
</tr>
</thead>
<tbody>
<tr>
<td>Austria</td>
<td>3</td>
<td>2</td>
</tr>
<tr>
<td>Belgium</td>
<td>8</td>
<td>1</td>
</tr>
</tbody>
</table>

a. Belgium has a comparative advantage in brooms.
b. Austria has a comparative advantage in steel.
c. Austria has an absolute advantage in steel.
d. Belgium has an absolute advantage in brooms.
e. All of the above.

*Ans:*  

6. Suppose that Australia and Brazil have the outputs per worker in producing sleds and clarinets shown in the table at the right. Then Brazil has a

<table>
<thead>
<tr>
<th>Good</th>
<th>Sleds</th>
<th>Clarinets</th>
</tr>
</thead>
<tbody>
<tr>
<td>Country</td>
<td>Australia</td>
<td>Brazil</td>
</tr>
<tr>
<td>Good</td>
<td>300</td>
<td>200</td>
</tr>
<tr>
<td>Clarinets</td>
<td>2</td>
<td>1</td>
</tr>
</tbody>
</table>

a. Comparative advantage in sleds.
b. Comparative advantage in clarinets.
c. Absolute advantage in sleds.
d. Absolute advantage in clarinets.
e. None of the above.

*Ans: a*

7. According to the theory of comparative advantage, countries gain from trade because

a. Trade makes firms behave more competitively, reducing their market power.
b. All firms can take advantage of cheap labor.
c. Output per worker in each firm increases.
d. World output can rise when each country specializes in what it does relatively best.
e. Every country has an absolute advantage in producing something.

*Ans: d*

8. If international trade takes place as a result of comparative advantage, it will cause which of the following effects in the participating countries?

a. Inequality among households will be reduced.
b. All individuals in each country will be better off.
c. The average well-being of people in both countries will increase.
d. Both countries will grow faster over time.
e. All of the above.

*Ans: c*

9. What policy does Paul Craig Roberts (in his “Statement”) advocate for dealing with what he sees as the adverse effects of trade?

a. Revalue the Chinese currency.
b. Separate the world into separate free trade zones, each with countries at different levels of development.
c. Raise tariffs on imports.
d. Enforce intellectual property laws to prevent advanced technologies from being used abroad.
e. Tax American workers and use the proceeds to compensate those who lose from globalization.

Ans:  b

Part II: Short Answer

Answer in the space provided.

1. Define the following terms:

   a. Trade Adjustment Assistance:
      Ans: Government programs that offer temporary assistance to workers who lose jobs due to competition with imports or due to the firms moving abroad.

   b. Opportunity Cost:
      Ans: The value of the best foregone alternative that is given up when something is chosen.

   c. Trade Liberalization:
      Ans: (Implicit in the article by Weller, Scott, and Hersh) Reduction in tariffs and other barriers to trade, permitting more trade to take place.

2. Each table below shows the amounts of labor required to produce one unit of each of two goods, X and Y, in two countries, A and B. In each case, identify which country has a comparative advantage in good X.

   a. Country A has comparative advantage in good X.

      \[
      \begin{array}{c|cc}
      \text{Good} & \text{Country A} & \text{Country B} \\
      \hline
      X & 1 & 6 \\
      Y & 4 & 8 \\
      \end{array}
      \]

   b. Country B has comparative advantage in good X.

      \[
      \begin{array}{c|cc}
      \text{Good} & \text{Country A} & \text{Country B} \\
      \hline
      X & 3 & 6 \\
      Y & 4 & 12 \\
      \end{array}
      \]
c. Country A has comparative advantage in good X.

<table>
<thead>
<tr>
<th>Good</th>
<th>A</th>
<th>B</th>
</tr>
</thead>
<tbody>
<tr>
<td>X</td>
<td>8</td>
<td>6</td>
</tr>
<tr>
<td>Y</td>
<td>4</td>
<td>2</td>
</tr>
</tbody>
</table>

3. The table here, unlike those above, shows labor productivities, i.e., outputs per worker. That is, these numbers report the quantity of output per unit of labor that each country can produce in the two industries, X and Y. Determine which country has

a. Absolute advantage in good X.  
   Ans: A

b. Absolute advantage in good Y.  
   Ans: A

c. Comparative advantage in good X.  
   Ans: B

d. Comparative advantage in good Y.  
   Ans: A

4. The table below shows the unit labor requirements for five goods in two countries.

<table>
<thead>
<tr>
<th>Good</th>
<th>Lugubria</th>
<th>Elatia</th>
<th>Ratio</th>
</tr>
</thead>
<tbody>
<tr>
<td>Turnips (hr/lb)</td>
<td>14</td>
<td>8</td>
<td>1.75</td>
</tr>
<tr>
<td>Elbow grease (hr/qt)</td>
<td>42</td>
<td>35</td>
<td>1.2</td>
</tr>
<tr>
<td>Fish netting (hr/yd)</td>
<td>140</td>
<td>70</td>
<td>2.0</td>
</tr>
<tr>
<td>Nicotine patches (hr/100)</td>
<td>33</td>
<td>30</td>
<td>1.1</td>
</tr>
<tr>
<td>Pianos (hr/piano)</td>
<td>1200</td>
<td>960</td>
<td>1.25</td>
</tr>
</tbody>
</table>

a. For each good, calculate the ratio of the unit labor requirement in Lugubria to that in Elatia, and record it in the far right column.

b. Suppose now that in the absence of any trade, the wage of labor in Lugubria is $4.00/hr and the wage in Elatia is $10.00/hr. Fill in the table below with the autarky prices of each good in each country.

<table>
<thead>
<tr>
<th>Good</th>
<th>Lugubria</th>
<th>Elatia</th>
</tr>
</thead>
<tbody>
<tr>
<td>Turnips ($/lb)</td>
<td>$56</td>
<td>$80</td>
</tr>
<tr>
<td>Elbow grease ($/qt)</td>
<td>$168</td>
<td>$350</td>
</tr>
<tr>
<td>Fish netting ($/yd)</td>
<td>$560</td>
<td>$700</td>
</tr>
<tr>
<td>Nicotine patches ($/100)</td>
<td>$132</td>
<td>$300</td>
</tr>
<tr>
<td>Pianos ($/piano)</td>
<td>$4800</td>
<td>$9600</td>
</tr>
</tbody>
</table>
c. If the wage in Lugubria is fixed, in what direction must the wage in Elatia change, if the two countries open to free trade, in order for both countries to have something that they can export to the other? What are the highest and the lowest wages that can prevail in Elatia with free trade, given the $4.00/hr wage in Lugubria? For which of the five goods can you predict with certainty the pattern of trade, and what is it?

Elatia’s wage must fall. The highest wage it can have is $8, at which it produces fish netting for $560, equal to Lugubria, with all other prices higher. The lowest wage is $4.40, at which it produces nicotine patches for $132, equal to Lugubria, and all other prices lower. Thus we can be sure that, with free trade, Elatia will export fish netting and Lugubria will export nicotine patches.

d. Suppose that a free trade equilibrium is achieved with a $4.00 wage in Lugubria and a wage exactly half way between the minimum and maximum that you found in part (c). Fill in the table below with the world prices of each good and the name of the country that will export it.

The maximum and minimum wages in part (c) were $8 and $4.40, so the wage here is $(8+4.40)/2 = $6.20. At that wage turnips, for example, cost $49.60 in Elatia, which is less than the $56 price in Lugubria. Therefore the world price is the lower of these two, $49.60.

<table>
<thead>
<tr>
<th>Good</th>
<th>World Price</th>
<th>Exported by</th>
</tr>
</thead>
<tbody>
<tr>
<td>Turnips ($/lb)</td>
<td>$49.60</td>
<td>Elatia</td>
</tr>
<tr>
<td>Elbow grease ($/qt)</td>
<td>$168</td>
<td>Lugubria</td>
</tr>
<tr>
<td>Fish netting ($/yd)</td>
<td>$434</td>
<td>Elatia</td>
</tr>
<tr>
<td>Nicotine patches ($/100)</td>
<td>$132</td>
<td>Lugubria</td>
</tr>
<tr>
<td>Pianos ($/piano)</td>
<td>$4800</td>
<td>Lugubria</td>
</tr>
</tbody>
</table>

e. Suppose that workers in both countries work 40 hours per week, 50 weeks per year, or 2000 hours per year. Calculate their annual incomes in units of each good, both in autarky and free trade, and record them below. (Hint: for each, just multiply 2000 times the wage and divide by the prevailing price of the good.) In what sense, if any, have these workers gained from trade?

Workers in both countries are better off, because their wages with free trade will buy more of some goods, and no less of others.
