Study Questions

Lecture 16
Fixed Versus Floating Exchange Rates

Part 1: Multiple Choice

Select the best answer of those given.

1. “Freely floating exchange rates” describes the exchange regimes of
   a. All but a small minority of the countries of the world.
   b. The major industrialized countries.
   c. Most very small countries.
   d. Most very poor countries.
   e. More currencies than have pegged exchange rates.

2. Movements of a country’s exchange rate tend to be undesirable from a macroeconomic standpoint because
   a. They usually cause inflation.
   b. They usually cause unemployment.
   c. They make it hard to strike a balance between inflation and unemployment.
   d. They crowd out investment.
   e. They increase the budget deficit.

3. At the microeconomic level, exchange rate movements can cause
   a. Uncertainty about the profitability of international transactions.
   b. One party to an international transaction to gain, and the other to lose, relative to what both had planned.
   c. Whole industries within a country to become uncompetitive.
   d. Workers to be laid off in community or region of the country.
   e. All of the above.
4. An advantage of a floating exchange rate is that
   a. It causes wages in different regions of a country to be equal.
   b. It raises the value of the currency to a higher level than could be achieved with a pegged rate.
   c. It permits the country to conduct an independent monetary policy.
   d. It constrains the government from issuing excessive debt.
   e. It prevents inflation.

5. A country with a pegged exchange rate is likely to be forced to devalue if
   a. Speculators believe that it will devalue.
   b. Its rate of inflation is smaller than inflation in other countries.
   c. It has no comparative advantage in trade.
   d. Its workers are less productive than workers elsewhere.
   e. Its central bank has contracted its money supply.

6. On what do Nobel Prize winners Friedman and Mundell agree, with regard to exchange rate systems?
   a. That floating exchange rates are bad
   b. That fixed exchange rates are bad
   c. That pegged exchange rates are bad
   d. That pegged exchange rates are good
   e. That fixed and floating exchange rates are equally good

7. Why, according to the reading by John Makin, “Exchange Rate Stability in International Finance,” had China been able to maintain a pegged exchange rate?
   a. The Chinese currency was not convertible to, and from, other currencies.
   b. By controlling prices, China avoided inflation.
   c. When Makin was writing – 2000 – China had not yet opened its borders to international trade.
   d. China did not have its own currency; it used the dollar.
   e. By pegging to the Japanese yen rather than the US dollar, China’s currency acquired greater strength.
Part II: Short Answer

Answer in the space provided

1. The figure at the right shows Jeffrey Frankel’s triangle representing the “Impossible Trinity.”

   a. Fill in the three dashed boxes at the points of the triangle with the appropriate labels.

   b. Write a short explanation of the economic message that is represented by the triangle.

2. Fill in the blanks:

   a. A “currency board” consists of a commitment to a

      __________________________ exchange rate, together with renouncing

      independent __________________________ policy.

   b. In the first half of the 1980s, the value of the U.S. dollar

      __________________________ by around 50%, causing sales of U.S. auto

      companies to __________________________.
c. In the Plaza Accord, major ___ ___________________ met at the Plaza Hotel in New York and agreed to stop the US dollar from ___
__________________. Presumably this meant that the then intervened in the exchange market, ___ _________________ dollars.

d. If a country with a pegged exchange rate has a high rate of inflation, then it will ultimately have to ____________________. If speculators know this, their actions will cause this to happen ____________________ than it would have otherwise.

e. It is widely believed that the Chinese currency, known both as the ___
_________ and the ___ ____________, is ___ ______-valued. If this situation continues, China is ___ ______________ (likely / not likely) to experience an exchange rate crisis.
3. The three figures below show supply and demand for the currencies of three countries, A, B, and C, in their respective foreign exchange markets *vis a vis* the dollar. The currencies are represented as §A, §B, etc. (say “A-notes,” etc.). Countries A and B have pegged exchange rates to the dollar at the rates shown as $E^A$ and $E^B$ respectively, while country C has a floating rate.

Suppose now that you are a speculator with ample resources in each of these countries as well as in the U.S. You are trying to pick one of these currencies on which to speculate by either buying it or selling it, hoping that the exchange rate will later move to your advantage.

a. Which one currency would you choose to speculate on?

b. Would you buy it or sell it?

c. Why would you pick the currency you picked in part (a)?
