

# Optical Frequency Standards

<http://www.gocomics.com/nonsequitur/1994/07/21>

What are they and what are they good for?

**E.A.ALDEN**

Leanhardt Lab

Department of Physics, University of Michigan

# This talk

- Define Optical Frequency Standards
- Compare Frequency Standards
- Describe structure of an atomic clock

## Time

Current standard:

Cesium

Future standard?

Frequency Comparison of Two High-Accuracy Al<sup>+</sup> Optical Clocks

C. W. Chou,<sup>\*</sup> D. B. Hume, J. C. J. Koelemeij,<sup>†</sup> D. J. Wineland, and T. Rosenband

## Mass

Current standard:

[http://www.bipm.org/en/scientific/mass/pictures\\_mass/prototype.html](http://www.bipm.org/en/scientific/mass/pictures_mass/prototype.html)

Future standard?

Avogadro Project

# Make $\nu$ big

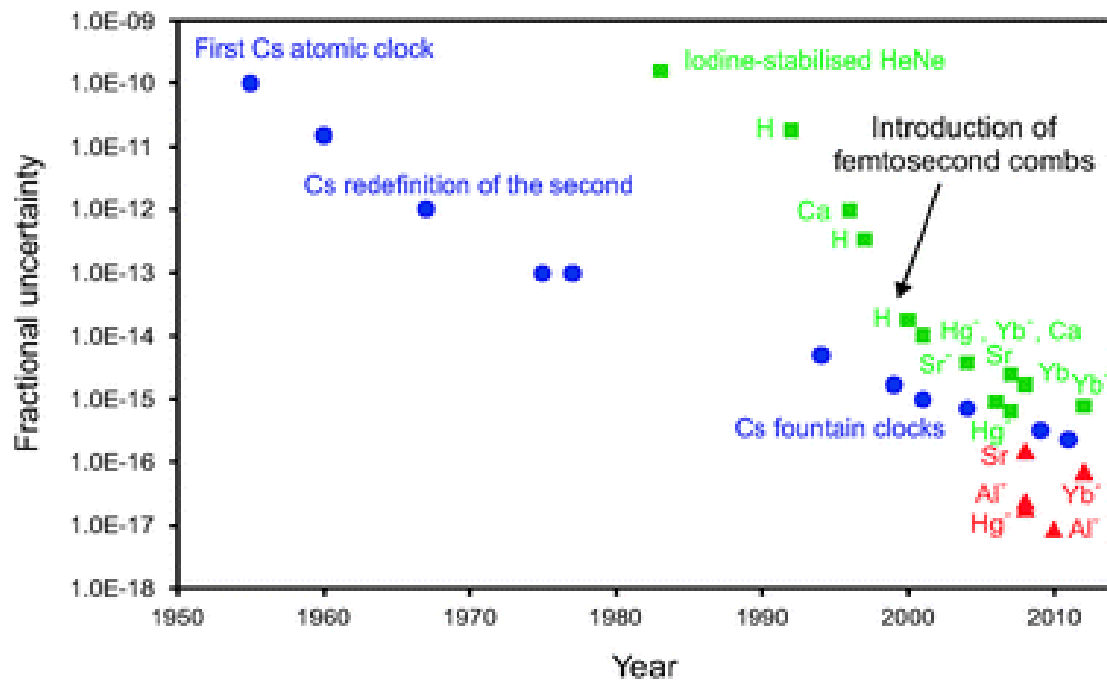

$$\sigma(\tau) = \left\langle \frac{\Delta \nu}{\nu} \right\rangle_{\tau}$$

## THE ELECTROMAGNETIC SPECTRUM

# Brief History of Time

# Why is an atom a good clock?

- Assumption:
  - atoms are equivalent
  - $\alpha$  is constant
  - light has constrained properties

www.laserfocusworld.com  
Accessed 2013

- Fractional frequency uncertainty

Theory Limit -

$$\sigma_\nu = \frac{\Delta\nu}{\nu} \sqrt{\frac{T}{\tau N}}$$

$\Delta\nu$  is the linewidth of the system

$\nu$  is the frequency of the sampling probe

$T$  is the duty cycle of the experiment

$\tau$  is the total experiment time

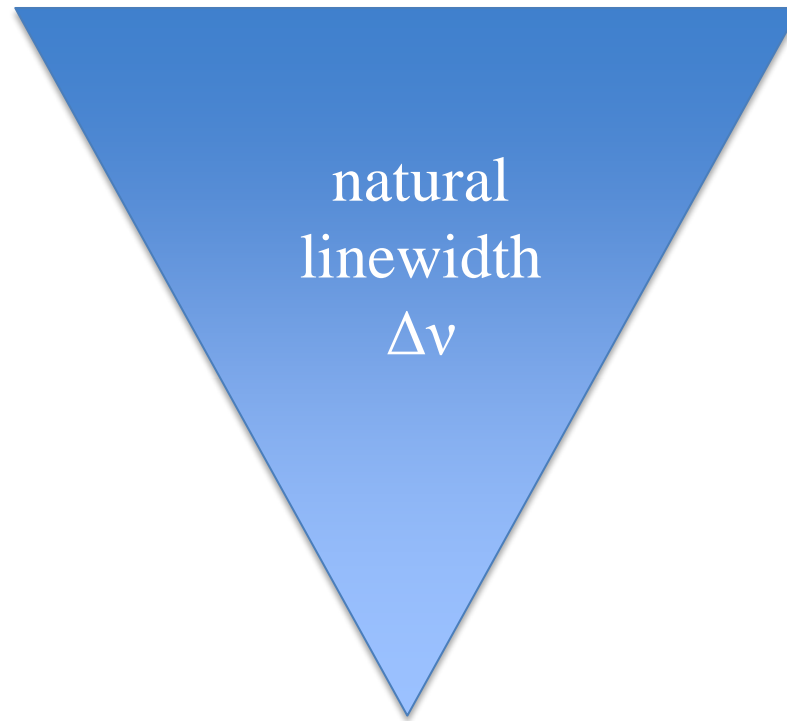

$N$  is the sample size per duty cycle

$$\sigma(\tau) = \left\langle \frac{\Delta\nu}{\nu} \right\rangle_{\tau}$$

- Narrow linewidth transition
- Narrow linewidth laser
- Large number of addressed resonators
- Long coherence times
- Long measurement times
- Laser excitation geometry (transit broadening)
- So on....

TABLE I. Systematic effects that shift the clock from its ideal unperturbed frequency. Shifts and uncertainties given are in fractional frequency units ( $\Delta\nu/\nu$ ). See text for discussion.

19 FEBRUARY 2010

## Frequency Comparison of Two High-Accuracy Al<sup>+</sup> Optical Clocks

C. W. Chou,<sup>\*</sup> D. B. Hume, J. C. J. Koelemeij,<sup>†</sup> D. J. Wineland, and T. Rosenband

*Time and Frequency Division, National Institute of Standards and Technology, Boulder, Colorado 80305, USA*

(Received 23 November 2009; published 17 February 2010)

We have constructed an optical clock with a fractional frequency inaccuracy of  $8.6 \times 10^{-18}$ , based on

$$\frac{\Delta \nu}{\nu} = 8.6 \times 10^{-18}$$

Mike Mosedale
