The project begins with a sheet of paper with some line drawn upon it. The tools start to cut out the shapes on their own and the shapes come to life. The box-like shape is created and it dances around. A rough, stick-figure style dog-like creature will be photoshopped in that will take the cube and run off with it. The self-assembling project is reminiscent of the elves and the shoemaker, who is overworked and the elves help him out. In this case, it is a ‘overworked’ architecture student whose project completes itself. The dog is just for humor.
