$4.6: 17,18,27$

## Proof Problems

Problem 8.1. Prove the following:
(1) Let $V$ and $W$ be vector spaces. Let $\left\{v_{1}, \ldots, v_{p}\right\}$ be a basis of $V$ and let $\left\{w_{1}, \ldots, w_{p}\right\}$ be an arbitrary set of vectors. Show that there is a unique linear transformation such that $T\left(v_{i}\right)=w_{i}$ for all $i$.
(2) Let $V$ and $W$ be vector spaces. Let $\left\{v_{1}, \ldots, v_{p}\right\}$ be a basis of $V$ and $\left\{w_{1}, \ldots, w_{p}\right\}$ be a basis of $W$. Show that a linear transformation $T: V \rightarrow W$ such that $T\left(v_{i}\right)=w_{i}$ for all $i$ is an isomorphism.
(3) Let $T$ be an isomorphism between vector spaces $V$ and $W$. Show that $\left\{v_{1}, \ldots, v_{p}\right\}$ is a basis if and only if $\left\{T\left(v_{1}\right), \ldots, T\left(v_{p}\right)\right\}$ is a basis.

## Problem 8.2.

(1) Let $A$ be an $n$-by- $n$ matrix. Show that

$$
N u l(A) \subseteq N u l\left(A^{2}\right) \subseteq N u l\left(A^{3}\right) \subseteq \cdots
$$

(2) Let $A$ be an $n$-by- $n$ matrix. Show that

$$
\operatorname{Col}(A) \supseteq \operatorname{Col}\left(A^{2}\right) \supseteq \operatorname{Col}\left(A^{3}\right) \supseteq \cdots
$$

(3) Let $A$ be a $m$-by- $n$ matrix and let $B$ be a $n$-by- $p$ matrix. Show that

$$
\operatorname{rank}(A B) \leq \operatorname{rank}(A), \operatorname{rank}(A B) \leq \operatorname{rank}(B) .
$$

Problem 8.3 Let $U, V, W$ be vector spaces and $T: U \rightarrow V$ and $S: V \rightarrow W$ are isomorphisms. Show that $S \circ T$ is also an isomorphism.
Problem 8.4 Prove the following:
(1) Let $U$ and $W$ be subspaces of a vector space $V$. Show that $U+V$, which is defined as the set $\{u+v \mid u \in U, v \in V\}$ is also a vector space.
(2) Show that $\operatorname{dim}(U)+\operatorname{dim}(V)=\operatorname{dim}(U \cap V)+\operatorname{dim}(U+V)$. (Hint: Start from a basis of $U \cap V$ )
