Description and extent

Another pass across the entire trench to remove more topsoil. We are coming down onto some large stones in the south and some lime inclusion. We've also gotten a couple pieces of faced plaster. We are now defining the rubble and trying to see if we have the beginnings of a wall.

**Description and extent**

This unit is the excavation of the western side of the trench, where it is in a little higher. During cleaning yesterday we began to uncover some features including a N-S. We removed a fair amount of rubble. We've exposed a N-S pier and rubble wall and possibly some of the south wall of the PHAB but this seems to be very rubbley. Curiously, south of where the south block-wall should be are some large sort of feature including a large ashlar pier block and a flat paver.

Description and extent

This unit is the excavation of the NE quadrant of the square. We’ve removed some more rubble in this pass. We may be getting another feature - an E-W piece of wall. We’ll keep some of it for the NE as part of this unit in order to define this feature better and remove any rubble that is floating. We have defined the wall in the NE corner. It runs E-W and abuts the NS wall.
