First excavated in 1991, this wall is both the south wall of the building and of the room excavated in CA9.6 NE. It is characterized primarily by football-sized stones and the conspicuous absence of piers, save at its eastern terminus in the trench, where it is interrupted by the threshold CA96030, and perhaps also by robbing. One
patch of thick plaster floor, CA96031, adjoins the wall to the north. A number of the pots found in the primary deposit in this room (CA96023) were up against this wall.

This threshold consists of roughly football-sized stones in what appears to be the doorway between CA96029 and CA96002, in the southeast corner of the room. It may also possibly be the lower course of CA96029, which may have been robbed. However, this threshold represents the only entrance to the room. The remains
of two plaster floors, CA96031 and CA96032, about the threshold to the west.
