PERSON W. WALL BENEATH HELL W. W 1

CURSE VISIBLE. IN GOOD CONDITION. 

This is a wider wall (ca. 1.0 m) below wall @ CB 15020.

The wall was exposed in cleaning operations for the aerial photography.

The wall is constructed of rubble, and seems to abut on the west face of CB 15017 at its east end. On the west, the wall does not appear to continue past the N-S wall that extends N from CB 15020 into CB 2.5 SW. The total preserved length of the wall is 1.9 m (E-W). The N face of the wall was cleaned in the excavation of CB 2.5 SW.

Cobble wall in N. of square, approx. 2m
preserved. No plaster facing preserved
in the CBI.5. portion of wall.

E-W wall of piers and rubble construction in N part of CB 1.5 NW.
The N face of the wall is in CB 2.5 SW and has patches of plaster
facing. The wall is preserved for 1.8 m in CB 1.5 NW, starting at
the NW corner of the quadrant. The wall is 0.8 m wide. Elevation
cut-top of piers, 464.70: On the S face at 464.30, floor CB 15029
abuts on the wall. The wall seems to be built on a wider
wall of rubble construction (CB 15036), the top of which is 464.07.
Wall CB 15020 has two courses of rubble preserved between the
two preserved piers.

N-S STONE WALL IN E. AREA OF TRENCH, CB1.5 NE.

WALL IS PRESSED FOR 3.15 M N-S IN CB 1.5, BUT CONTINUES N INTO CB 2.5.

WIDTH (E-W) OF WALL AT END OF TRENCH, 0.90 M. 2.1 M S OF THE N TRENCH

EDGE ON THE E FACE OF THE WALL, THE WALL WIDENS TO THE E SO THAT

IT IS 1.2 M WIDE. TWO RECTANGULAR STONES HERE FORM A CORNER

ROUGHLY 1.2 X 1.2 M SQUARE. WALL CB15022 EXTENDS E FROM (OVER)
This pair of stones into the E baulk.

One of the stones in the narrow N section is roughly 0.9 m square and has an un worn circular area ca. 0.6 m in diameter that suggests a column once stood on it.

On the E face of the wall, Floor CB15029 abuts on the wall at 464.09.
On the W face of the wall, Floor CB15030 abuts on the wall at 464.11.

Where Floor CB15030 has been removed E of the wall, a wider rubble foundation course was exposed, top surface 463.88. The rubble foundation juts out ca. 0.19 m E of the ashlar blocks above. Lowest level excavated in this area, 463.83.

Cuttings in the stones on either side of the column shadow suggest that a balustrade or blocking wall was added between the columns while they were still standing.

The larger corner blocks (1.2 x 1.2 m) probably did not support a column, but rather a square pier. No circular un worn area shows on the top surface of these blocks, and all other column-supporting stones discovered this season are one solid block.

This locus consists of the removal of dirt mostly in the NE corner of the NW quadrant of CB 1.5 in order to determine if the East-west wall CB15020 was robbed. Dirt was removed where there was minimal rubble and areas where there was clearly no floor.

This soil locus is a robber's trench over wall CB15020/036. The soil is compact, silty, yellow, and has minimal inclusions. The locus abuts on the standing remains of CB15020 at W, (OVER)
the N trench edge at N, floor CB15029 at E and at S. This soil locus also covers the Northern part of Wall CB15017 where CB15017 abuts on wall CB15036.

This locus consists of defining floor CB15029 and wall CB15023 to determine if the wall was robbed out. Rubble was removed north of CB15019 which revealed the top of wall CB15023 and revealed that floor CB15029 had been cut just as it came to the wall.

This locus is a robber's trench covering wall CB15023. To the N the trench is bounded by floor CB15029, to the E by robber's trench CB15027, to the S by pit CB15024 and (over)
Floor CB15019, and to the W by the W trench edge. The fill had a high concentration of rubble, particularly along the S edge where it abuts on pit CB15024. Numerous limestone inclusions turn the soil light gray.

This floor runs through quadrants NW and NE quadrants of CB1.5. The floor
covers the north half of the NW quadrant and
the west half of the NE quadrant. The floor
runs up to and along walls CB15023, CB15021,
and CB15022. The floor is made up of plaster
and is well preserved.

The floor partially covers wall CB15017, so it is assumed
that the preserved surfaces in CB1.5 NW + NE were once
a single contiguous floor. Robben's trenches CB15025+026 may
have cut the floor surface in the N part of CB1.5 NW.
Between stylobate CB15022 and the S baulk of CB1.5 NE, two distinct layers of floor surface can be seen at 464.15 and 464.04 m asl.

The floor was exposed but not excavated in 2009.

The smaller preserved patch lies between Walls CB15020 to 023, with an E-W extent of 3.7 m and a N-S extent of 1.6 m.

The larger preserved patch lies W & S of stylobate CB15021 to 022, with a N-S extent of 4 m, and an E-W extent of 4.5 m. The floor continues N into CB 2.5 SE.

This locus consists of removing surface in the NE quadrant of CB 1.5. Small 'islands' of poorly
preserved surface were taken up along with
a patch of better preserved surface. The
surface was located at the intersection of
walls CB15021 and CB15022. The surface was
mostly made up of dense limestone, like
a subsurface. A better preserved portion of the actual
plaster surface (rather than only subsurface) was uncovered
beneath the cobbles of CB15031, but was not removed.
The surface/subsurface about on the E & N faces of (OVER)
Stylobate CB15021 + 022.
The floor appears to be very similar to CB15019 + CB15029.
The preserved surface continued into the escarp of CB 1.5 NE, and it is also visible in CB 2.5 SE.

KEDESH LOCUS SHEET

AREA: CB 1.5 NE Quad
LOCUS: CB15031

TYPE (WALL, FLOOR, FILL ETC.): FLOOR

BEG. LEVEL(S): 4164.17
END LEVEL(S): 4124.09

UNDER LOCUS (ES): CB15001
OVER LOCUS(ES): N/A

UNITS IN LOCUS: 155

FINDS:

1. POTTERY: TOTAL WT. 5 FINE 2 diag  UNID. 4

LDM Gamla

SPAN/CONDITION: N/A; small to medium and worn

2. LAMPS: WHEELEDMADE HELL. MOULDMADE ROMAN

3. COINS

4. FAUNAL

5. OTHER

6. INV.

7. SEDIMENT ANALYSIS/FLOAT

LOCUS DESCRIPTION: INCLUDE 1. PHYSICAL DESCRIPTION, PRESERVATION, EXTENT
2. RELATION TO OTHER LOCIE OVER/UNDER/ TOUCHING/BONDING WITH OTHER
FLOORS/FILLS/WALLS ETC. USE OTHER SIDE OF SHEET IF NECESSARY.

This locus consists of the removal of cobble East of the stylobate in the NE quadrant of CB1.5. The cobble may have been a squatter surface and was laid on top of floor CB15031. The LDM of Gamla cookware supports the squatter date. The cobble surface is probably associated with the taboun/tanoor (?) installation found a few meters N in CB2.5.
