Figure 1: Figures of merit $Y$ for $n_i = $ standard, anapole, and dipole operators for candidate masses of 50 and 250 GeV. We display the equal exposure and equal event bar charts side by side to underscore the robustness of the discrimination.
Figure 2: Figures of merit $Y$ for $n_i = q^2$ and $q^{-4}$ operators for candidate masses of 50 and 250 GeV. We display the equal exposure and equal event bar charts side by side to underscore the robustness of the discrimination.
