**US-Italy Workshop (July 17-20, 02)**

The US-Italy Workshop was a good exchange of technical information covering various aspect of bridge technology. The workshop format was very appropriate, with technical presentations on the state of the art between the two countries and combined with the visits to the architectural and historical places. Professor Giuliano Augusti and his colleague hosts were very gracious and provided very good program throughout the workshop. Professor Andrzej S. Nowak managed and coordinated this technology transfer workshop in a very professional fashion.

Suggestion: We can study the different design provisions of the LRFD and Euro code by designing a medium multi-span continuous steel superstructure with a concrete substructure by the respective designers.
