## PROBLEM SET 4 (DUE ON THURSDAY, OCT 6)

(All Exercises are references to the August 29, 2022 version of *Foundations of Algebraic Geometry* by R. Vakil.)

- **Problem 1.** Exercise 4.3.F (functions on locally ringed spaces)
- **Problem 2.** Let  $X_1 = \operatorname{Spec} k[x, y]$  and  $X_2 = \operatorname{Spec} k[w, z]$  be two copies of the affine plane over a field k. Let X be the scheme formed by gluing  $X_1$  and  $X_2$  along the isomorphism of open subschemes  $\operatorname{Spec} k[x, x^{-1}, y] \cong \operatorname{Spec} k[w, w^{-1}, z]$  induced by the ring isomorphism  $k[x, x^{-1}, y] \cong k[w, w^{-1}, z]$  given by  $x \mapsto w, y \mapsto w^{-1}z$ . Compute the ring of global sections of the structure sheaf of X. Is X affine?
- **Problem 3.** Exercise 7.3.M (morphisms from Spec of a local ring)
- **Problem 4.** Describe all morphisms of  $\pi : \mathbb{P}^1_k \to \mathbb{P}^1_k$  that commute with the natural morphism  $\mathbb{P}^1_k \to \operatorname{Spec} k$ . (Note: this is saying that  $\pi$  is a "morphism of k-schemes". Hint: if  $\pi$  maps the generic point to the generic point, consider the induced map of stalks there.)
