

Transformation of generic differentiable functions to convex functions:

Necessary and sufficient conditions

Shrutivandana Sharma

IOE 611, Winter 2006

University of Michigan, Ann Arbor

Motivation

A wireless communication problem

How to deal with non-convex problems ?

Convexification of non-convex functions

Necessary conditions

Sufficient conditions

Example

Checking the necessary conditions for the wireless communication problem

Conclusions

A wireless communication problem

How to deal with non-convex problems ?

Convexification of non-convex functions

Necessary conditions

Sufficient conditions

Example

Checking the necessary conditions for the wireless communication problem

Conclusions

A wireless communication problem

Power allocation for a mesh network

- ▶ Signal to Interference ratio: $\gamma_1 = (p_1 h_{11}) / (N_0 + \sum_{j \neq 1} p_j h_{j1})$

Motivation

A wireless communication problem

How to deal with non-convex problems ?

Convexification of non-convex functions

Necessary conditions

Sufficient conditions

Example

Checking the necessary conditions for the wireless communication problem

Conclusions

A wireless communication problem

Power allocation for a mesh network

- ▶ Signal to Interference ratio: $\gamma_1 = (p_1 h_{11}) / (N_0 + \sum_{j \neq 1} p_j h_{j1})$
- ▶ Quality of Service is determined by $U_1(\gamma_1)$
 $U_1(\cdot)$ is an increasing function

Motivation

A wireless communication problem

How to deal with non-convex problems ?

Convexification of non-convex functions

Necessary conditions

Sufficient conditions

Example

Checking the necessary conditions for the wireless communication problem

Conclusions

A wireless communication problem

Power allocation for a mesh network

- ▶ Signal to Interference ratio: $\gamma_1 = (p_1 h_{11}) / (N_0 + \sum_{j \neq 1} p_j h_{j1})$
- ▶ Quality of Service is determined by $U_1(\gamma_1)$
 $U_1(\cdot)$ is an increasing function
- ▶ Objective: $\max_{p_1, p_2, \dots, p_N} \sum_{j=1}^N U_j(\gamma_j)$

Motivation

A wireless communication problem

How to deal with non-convex problems ?

Convexification of non-convex functions

Necessary conditions

Sufficient conditions

Example

Checking the necessary conditions for the wireless communication problem

Conclusions

A wireless communication problem

Power allocation for a mesh network

- ▶ Signal to Interference ratio: $\gamma_1 = (p_1 h_{11}) / (N_0 + \sum_{j \neq 1} p_j h_{j1})$
- ▶ Quality of Service is determined by $U_1(\gamma_1)$
 $U_1(\cdot)$ is an increasing function
- ▶ Objective: $\max_{p_1, p_2, \dots, p_N} \sum_{j=1}^N U_j(\gamma_j)$
- ▶ Problem: Objective is not concave in (p_1, p_2, \dots, p_N)

Motivation

A wireless communication problem

How to deal with non-convex problems?

Convexification of non-convex functions

Necessary conditions

Sufficient conditions

Example

Checking the necessary conditions for the wireless communication problem

Conclusions

How to deal with non-convex problems ?

Motivation

A wireless communication problem

How to deal with non-convex problems ?

Convexification of non-convex functions

Necessary conditions

Sufficient conditions

Example

Checking the necessary conditions for the wireless communication problem

Conclusions

How to deal with non-convex problems ?

Some approaches

- ▶ Use a convex transformation of the problem if known, example - Geometric programs

Motivation

A wireless communication problem

How to deal with non-convex problems ?

Convexification of non-convex functions

Necessary conditions

Sufficient conditions

Example

Checking the necessary conditions for the wireless communication problem

Conclusions

How to deal with non-convex problems ?

Some approaches

- ▶ Use a convex transformation of the problem if known, example - Geometric programs
- ▶ Approximation of the functions involved by convex functions as in branch and bound or outer approximation techniques

Motivation

A wireless communication problem

How to deal with non-convex problems ?

Convexification of non-convex functions

Necessary conditions

Sufficient conditions

Example

Checking the necessary conditions for the wireless communication problem

Conclusions

How to deal with non-convex problems ?

Some approaches

- ▶ Use a convex transformation of the problem if known, example - Geometric programs
- ▶ Approximation of the functions involved by convex functions as in branch and bound or outer approximation techniques

Questions

- ▶ What can we do with unfamiliar non-convex problems?

Motivation

The problem

Motivation

A wireless communication problem

How to deal with non-convex problems ?

Convexification of non-convex functions

Necessary conditions

Sufficient conditions

Example

Checking the necessary conditions for the wireless communication problem

Conclusions

The problem

- ▶ $\phi(x) : \mathbf{R}^n \rightarrow \mathbf{R}$, twice continuously differentiable, $\text{dom } \phi = D$, τ sublevel set L_τ , $\alpha = \inf \phi(x)$, $\beta = \sup \phi(x)$.

Motivation

A wireless communication problem

How to deal with non-convex problems ?

Convexification of non-convex functions

Necessary conditions

Sufficient conditions

Example

Checking the necessary conditions for the wireless communication problem

Conclusions

The problem

- ▶ $\phi(x) : \mathbf{R}^n \rightarrow \mathbf{R}$, twice continuously differentiable, **dom** $\phi = D$, τ sublevel set L_τ , $\alpha = \inf \phi(x)$, $\beta = \sup \phi(x)$.
- ▶ We want a twice continuously differentiable, strictly increasing function $F(\tau)$, $\alpha \leq \tau < \beta : f(x) = F(\phi(x))$ is convex in D .

Motivation

A wireless communication problem

How to deal with non-convex problems ?

Convexification of non-convex functions

Necessary conditions

Sufficient conditions

Example

Checking the necessary conditions for the wireless communication problem

Conclusions

The problem

- ▶ $\phi(x) : \mathbf{R}^n \rightarrow \mathbf{R}$, twice continuously differentiable, **dom** $\phi = D$, τ sublevel set L_τ , $\alpha = \inf \phi(x)$, $\beta = \sup \phi(x)$.
- ▶ We want a twice continuously differentiable, strictly increasing function $F(\tau)$, $\alpha \leq \tau < \beta : f(x) = F(\phi(x))$ is convex in D .

Note: Monotonicity of F implies that ϕ and f have same minimizers.

Motivation

A wireless communication problem

How to deal with non-convex problems?

Convexification of non-convex functions

Necessary conditions

Sufficient conditions

Example

Checking the necessary conditions for the wireless communication problem

Conclusions

The problem

- ▶ $\phi(x) : \mathbf{R}^n \rightarrow \mathbf{R}$, twice continuously differentiable, **dom** $\phi = D$, τ sublevel set L_τ , $\alpha = \inf \phi(x)$, $\beta = \sup \phi(x)$.
- ▶ We want a twice continuously differentiable, strictly increasing function $F(\tau)$, $\alpha \leq \tau < \beta : f(x) = F(\phi(x))$ is convex in D .

Note: Monotonicity of F implies that ϕ and f have same minimizers.

- ▶ The derivatives of $f(x)$ can be written as:

$$\nabla f(x) = F'(\phi(x)) \nabla \phi(x) \quad (1)$$

$$\nabla^2 f(x) = F''(\phi(x)) \nabla \phi(x) \nabla \phi(x)^T + F'(\phi(x)) \nabla^2 \phi(x) \quad (2)$$

Motivation

A wireless communication problem

How to deal with non-convex problems?

Convexification of non-convex functions

Necessary conditions

Sufficient conditions

Example

Checking the necessary conditions for the wireless communication problem

Conclusions

Necessary conditions

Motivation

A wireless communication problem

How to deal with non-convex problems ?

Convexification of non-convex functions

Necessary conditions

Sufficient conditions

Example

Checking the necessary conditions for the wireless communication problem

Conclusions

Necessary conditions

Suppose $f(x)$ is convex, then,

$\nabla f(x) = 0$ only at the global minima of $f(x)$, if they exist.

Motivation

A wireless communication problem

How to deal with non-convex problems ?

Convexification of non-convex functions

Necessary conditions

Sufficient conditions

Example

Checking the necessary conditions for the wireless communication problem

Conclusions

Necessary conditions

Suppose $f(x)$ is convex, then,
 $\nabla f(x) = 0$ only at the global minima of $f(x)$, if they exist.

Necessary condition-A

- ▶ $\phi(x)$ has no critical points ($\nabla\phi(x) = 0$) except those at which it attains its global minimum, if it exists.

Motivation

A wireless communication problem

How to deal with non-convex problems ?

Convexification of non-convex functions

Necessary conditions

Sufficient conditions

Example

Checking the necessary conditions for the wireless communication problem

Conclusions

Necessary conditions

Suppose $f(x)$ is convex, then,
 $\nabla f(x) = 0$ only at the global minima of $f(x)$, if they exist.

Necessary condition-A

- ▶ $\phi(x)$ has no critical points ($\nabla\phi(x) = 0$) except those at which it attains its global minimum, if it exists.
- ▶ Since $F'(\tau) \geq 0$ for $\alpha \leq \tau < \beta$, it follows from (1) that,
 $F'(\tau) > 0$ for $\tau > \alpha$.

Motivation

A wireless communication problem

How to deal with non-convex problems ?

Convexification of non-convex functions

Necessary conditions

Sufficient conditions

Example

Checking the necessary conditions for the wireless communication problem

Conclusions

Necessary conditions

Suppose $f(x)$ is convex, then,
 $\nabla f(x) = 0$ only at the global minima of $f(x)$, if they exist.

Necessary condition-A

- ▶ $\phi(x)$ has no critical points ($\nabla\phi(x) = 0$) except those at which it attains its global minimum, if it exists.
- ▶ Since $F'(\tau) \geq 0$ for $\alpha \leq \tau < \beta$, it follows from (1) that,
 $F'(\tau) > 0$ for $\tau > \alpha$.

Necessary condition - B

- ▶ In order that there may exist a twice differentiable strictly increasing function $F(\tau)$ such that $F(\phi(x))$ is convex, it is necessary that for each fixed $x \in D$,

Motivation

Checking the necessary conditions for the wireless communication problem

Conclusions

Proof of (B), (cont')

Motivation

A wireless communication problem

How to deal with non-convex problems ?

Convexification of non-convex functions

Necessary conditions

Sufficient conditions

Example

Checking the necessary conditions for the wireless communication problem

Conclusions

Proof of (B), (cont')

- ▶ The characteristic polynomial $C_A(\lambda)$ can be written as (with $T_0 = 1$),

$$C_A(\lambda) = (-1)^n T_0 \lambda^n + (-1)^{n-1} T_1 \lambda^{n-1} + \dots - T_{n-1} \lambda + T_n \quad (7)$$

Motivation

A wireless communication problem

How to deal with non-convex problems ?

Convexification of non-convex functions

Necessary conditions

Sufficient conditions

Example

Checking the necessary conditions for the wireless communication problem

Conclusions

Proof of (B), (cont')

- ▶ The characteristic polynomial $C_A(\lambda)$ can be written as (with $T_0 = 1$),

$$C_A(\lambda) = (-1)^n T_0 \lambda^n + (-1)^{n-1} T_1 \lambda^{n-1} + \dots - T_{n-1} \lambda + T_n \quad (7)$$

- ▶ Let $P := \nabla^2 \phi$, and

$$C_P(\lambda) = (-1)^n S_0 \lambda^n + (-1)^{n-1} S_1 \lambda^{n-1} + \dots - S_{n-1} \lambda + S_n \quad (8)$$

Motivation

A wireless communication problem

How to deal with non-convex problems ?

Convexification of non-convex functions

Necessary conditions

Sufficient conditions

Example

Checking the necessary conditions for the wireless communication problem

Conclusions

Proof of (B), (cont')

- ▶ The characteristic polynomial $C_A(\lambda)$ can be written as (with $T_0 = 1$),

$$C_A(\lambda) = (-1)^n T_0 \lambda^n + (-1)^{n-1} T_1 \lambda^{n-1} + \dots - T_{n-1} \lambda + T_n \quad (7)$$

- ▶ Let $P := \nabla^2 \phi$, and

$$C_P(\lambda) = (-1)^n S_0 \lambda^n + (-1)^{n-1} S_1 \lambda^{n-1} + \dots - S_{n-1} \lambda + S_n \quad (8)$$

- ▶ **Lemma 1:**

Let $Q_{P^*}(y)$ be the quadratic form derived by restricting $Q_P(y)$ to the hyperplane $\nabla \phi^T y = 0$, and let its characteristic polynomial be $C_{P^*}(\lambda)$. Then,

$$C_A(\lambda) = C_P(\lambda) + \sigma k^2 C_{P^*}(\lambda) \quad (9)$$

Motivation

A wireless communication problem

How to deal with non-convex problems?

Convexification of non-convex functions

Necessary conditions

Sufficient conditions

Example

Checking the necessary conditions for the wireless communication problem

Conclusions

Proof of (B), (cont')

- ▶ The characteristic polynomial $C_A(\lambda)$ can be written as (with $T_0 = 1$),

$$C_A(\lambda) = (-1)^n T_0 \lambda^n + (-1)^{n-1} T_1 \lambda^{n-1} + \dots - T_{n-1} \lambda + T_n \quad (7)$$

- ▶ Let $P := \nabla^2 \phi$, and

$$C_P(\lambda) = (-1)^n S_0 \lambda^n + (-1)^{n-1} S_1 \lambda^{n-1} + \dots - S_{n-1} \lambda + S_n \quad (8)$$

- ▶ **Lemma 1:**

Let $Q_{P^*}(y)$ be the quadratic form derived by restricting $Q_P(y)$ to the hyperplane $\nabla \phi^T y = 0$, and let its characteristic polynomial be $C_{P^*}(\lambda)$. Then,

$$C_A(\lambda) = C_P(\lambda) + \sigma k^2 C_{P^*}(\lambda) \quad (9)$$

- ▶ **Proof:**

The eigen values of P^* are the stationary values of $Q_P(y)$ subject to the constraints $\nabla \phi^T y = 0$ and $y^T y = 1$.

KKT conditions: For $z, \lambda \in \mathbf{R}$ and $y \in \mathbf{R}^n$,

$$\begin{aligned} L(y, z, \lambda) &= y^T \nabla^2 \phi y + 2z \nabla \phi^T y - \lambda (y^T y - 1) \\ &\Rightarrow 2[\nabla^2 \phi y + z \nabla \phi - \lambda y] = 0 \end{aligned} \quad (10)$$

$$\nabla \phi^T y = 0 \quad (11)$$

$$y^T y = 1 \quad (12)$$

Motivation

A wireless communication problem

How to deal with non-convex problems?

Convexification of non-convex functions

Necessary conditions

Sufficient conditions

Example

Checking the necessary conditions for the wireless communication problem

Conclusions

Proof of (B), (cont')

Proof of Lemma 1 (cont')

Motivation

A wireless communication problem

How to deal with non-convex problems ?

Convexification of non-convex functions

Necessary conditions

Sufficient conditions

Example

Checking the necessary conditions for the wireless communication problem

Conclusions

Proof of (B), (cont')

Proof of Lemma 1 (cont')

- ▶ For a non-zero solution (y, z) of (10) and (11), λ must solve,

$$\begin{vmatrix} \nabla^2 \phi - \lambda I & \nabla \phi \\ \nabla \phi^T & 0 \end{vmatrix} = 0 \quad (13)$$

Motivation

A wireless communication problem

How to deal with non-convex problems ?

Convexification of non-convex functions

Necessary conditions

Sufficient conditions

Example

Checking the necessary conditions for the wireless communication problem

Conclusions

Proof of (B), (cont')

Proof of Lemma 1 (cont')

- ▶ For a non-zero solution (y, z) of (10) and (11), λ must solve,

$$\begin{vmatrix} \nabla^2 \phi - \lambda I & \nabla \phi \\ \nabla \phi^T & 0 \end{vmatrix} = 0 \quad (13)$$

- ▶ If (y, z, λ) is a solution of (10) – (13) $\Rightarrow y^T \nabla^2 \phi y = \lambda$.
Therefore (13) is the characteristic equation of P^* without normalization.

A wireless communication problem

How to deal with non-convex problems ?

Convexification of non-convex functions

Necessary conditions

Sufficient conditions

Example

Checking the necessary conditions for the wireless communication problem

Conclusions

Proof of (B), (cont')

Proof of Lemma 1 (cont')

- ▶ For a non-zero solution (y, z) of (10) and (11), λ must solve,

$$\begin{vmatrix} \nabla^2 \phi - \lambda I & \nabla \phi \\ \nabla \phi^T & 0 \end{vmatrix} = 0 \quad (13)$$

- ▶ If (y, z, λ) is a solution of (10) – (13) $\Rightarrow y^T \nabla^2 \phi y = \lambda$.
Therefore (13) is the characteristic equation of P^* without normalization.
- ▶ Obtaining the coefficient of λ^{n-1} for normalization,

$$\begin{vmatrix} -I & \nabla \phi \\ \nabla \phi^T & 0 \end{vmatrix} = (-1)^n \nabla \phi^T \nabla \phi$$
$$\Rightarrow C_{P^*}(\lambda) = -\frac{1}{k^2} \begin{vmatrix} \nabla^2 \phi - \lambda I & \nabla \phi \\ \nabla \phi^T & 0 \end{vmatrix} \quad \text{where } k^2 = \nabla \phi^T \nabla \phi \quad (14)$$

$$\Rightarrow C_A(\lambda) = C_P(\lambda) + \sigma k^2 C_{P^*}(\lambda) \quad (15)$$

Motivation

A wireless communication problem

How to deal with non-convex problems?

Convexification of non-convex functions

Necessary conditions

Sufficient conditions

Example

Checking the necessary conditions for the wireless communication problem

Conclusions

Proof of (B), (cont')

Proof of Lemma 1 (cont')

- ▶ For a non-zero solution (y, z) of (10) and (11), λ must solve,

$$\begin{vmatrix} \nabla^2 \phi - \lambda I & \nabla \phi \\ \nabla \phi^T & 0 \end{vmatrix} = 0 \quad (13)$$

- ▶ If (y, z, λ) is a solution of (10) – (13) $\Rightarrow y^T \nabla^2 \phi y = \lambda$.
Therefore (13) is the characteristic equation of P^* without normalization.
- ▶ Obtaining the coefficient of λ^{n-1} for normalization,

$$\begin{vmatrix} -I & \nabla \phi \\ \nabla \phi^T & 0 \end{vmatrix} = (-1)^n \nabla \phi^T \nabla \phi$$

$$\Rightarrow C_{P^*}(\lambda) = -\frac{1}{k^2} \begin{vmatrix} \nabla^2 \phi - \lambda I & \nabla \phi \\ \nabla \phi^T & 0 \end{vmatrix} \quad \text{where } k^2 = \nabla \phi^T \nabla \phi \quad (14)$$

$$\Rightarrow C_A(\lambda) = C_P(\lambda) + \sigma k^2 C_{P^*}(\lambda) \quad (15)$$

- ▶ Further, let

$$C_{P^*}(\lambda) = (-1)^{n-1} S_0^* \lambda^{n-1} + (-1)^{n-2} S_1^* \lambda^{n-2} + \dots - S_{n-2}^* \lambda + S_{n-1} \quad (16)$$

$$\text{Then } T_\rho = S_\rho + \sigma k^2 S_{\rho-1}^*, \quad \rho = 1, 2, \dots, n \quad (17)$$

- ▶ We want to check whether there exists an increasing function $U_1(\tau)$ such that $U_1(\gamma_1(p))$ is concave in p .
- ▶ The function of interest is,

$$\phi(p) = \gamma_1(p) = \frac{p_1 h_{11}}{N_0 + \frac{1}{B} p_2 h_{21}} \quad (30)$$

$$\Rightarrow \nabla \phi(p) = \begin{bmatrix} \frac{h_{11}}{N_0 + \frac{1}{B} p_2 h_{21}} \\ \frac{-p_1 h_{11}}{B(N_0 + \frac{1}{B} p_2 h_{21})^2} h_{21} \end{bmatrix} \quad (31)$$

Motivation

A wireless communication problem

How to deal with non-convex problems?

Convexification of non-convex functions

Necessary conditions

Sufficient conditions

Example

Checking the necessary conditions for the wireless communication problem

Conclusions

An example

Checking the necessary conditions for the wireless communication problem

- ▶ Consider a two user system ($M = 2$)
- ▶ We want to check whether there exists an increasing function $U_1(\tau)$ such that $U_1(\gamma_1(p))$ is concave in p .
- ▶ The function of interest is,

$$\phi(p) = \gamma_1(p) = \frac{p_1 h_{11}}{N_0 + \frac{1}{B} p_2 h_{21}} \quad (30)$$

$$\Rightarrow \nabla \phi(p) = \begin{bmatrix} \frac{h_{11}}{N_0 + \frac{1}{B} p_2 h_{21}} \\ \frac{-p_1 h_{11}}{B(N_0 + \frac{1}{B} p_2 h_{21})^2} h_{21} \end{bmatrix} \quad (31)$$

- ▶ Since $\nabla \phi(p) \neq 0$ for $p_1, p_2 \in (0, P_{max})$, Necessary condition A is satisfied.

Motivation

A wireless communication problem

How to deal with non-convex problems?

Convexification of non-convex functions

Necessary conditions

Sufficient conditions

Example

Checking the necessary conditions for the wireless communication problem

Conclusions
