## Math 116 - Practice for Exam 3

Generated April 6, 2023
NAME: $\qquad$
Instructor: $\qquad$ Section Number: $\qquad$

1. This exam has 4 questions. Note that the problems are not of equal difficulty, so you may want to skip over and return to a problem on which you are stuck.
2. Do not separate the pages of the exam. If any pages do become separated, write your name on them and point them out to your instructor when you hand in the exam.
3. Please read the instructions for each individual exercise carefully. One of the skills being tested on this exam is your ability to interpret questions, so instructors will not answer questions about exam problems during the exam.
4. Show an appropriate amount of work (including appropriate explanation) for each exercise so that the graders can see not only the answer but also how you obtained it. Include units in your answers where appropriate.
5. You may use any calculator except a TI-92 (or other calculator with a full alphanumeric keypad). However, you must show work for any calculation which we have learned how to do in this course. You are also allowed two sides of a $3^{\prime \prime} \times 5^{\prime \prime}$ note card.
6. If you use graphs or tables to obtain an answer, be certain to include an explanation and sketch of the graph, and to write out the entries of the table that you use.
7. You must use the methods learned in this course to solve all problems.

| Semester | Exam | Problem | Name | Points | Score |
| ---: | :---: | :---: | :--- | ---: | :---: |
| Winter 2022 | 3 | 5 |  | 16 |  |
| Fall 2021 | 3 | 7 | fan | 17 |  |
| Winter 2021 | 3 | 7 | boats | 15 |  |
| Fall 2019 | 3 | 2 | rodent bite | 9 |  |
| Total |  | 57 |  |  |  |

Recommended time (based on points): 68 minutes
5. [16 points] The following problems relate to the polar graph shown below, defined by the polar curve $r(\theta)=2 \sin (2 \theta)+1$, on the domain $[0,2 \pi]$. Both the dashed and solid curves are part of the graph of $r(\theta)$.

a. [4 points] Find all $\theta$ values in the interval $[0,2 \pi]$ such that $r(\theta)=0$.

Answers: $\qquad$
b. [4 points] Determine the $\theta$ intervals corresponding to the dashed portions $\mathcal{A}$ and $\mathcal{B}$ of the curve above.
$\qquad$
c. [4 points] Write an expression involving one or more integrals for the area of the region enclosed by the solid curves only (do not include the region enclosed by the dashed curves).
d. [4 points] Write an expression involving one or more integrals for the total arc length of the dashed curves in the graph above.
7. [17 points] John is holding a Fan Fair to celebrate the success of his burgeoning fan business. At the fair, John is debuting his new fan, which has blades given by the shaded region of the graph of the polar equation $r=\cos (3 \theta)+\frac{1}{2}$ shown below. Note that the graph of $r=\cos (3 \theta)+\frac{1}{2}$ is comprised of both the inner and outer loops of the fan blades. One of the activities at the Fan Fair is to guess the perimeter and area of the blades, which can actually be computed explicitly.

a. [4 points] For the values of $\theta$ listed below, write on the line the letter of the point corresponding to it.

$$
\begin{array}{ll}
\theta=0: \quad & \theta=\frac{\pi}{3}: \\
\theta=\frac{\pi}{2}: \quad & \theta=\pi:
\end{array}
$$

b. [5 points] Find the 3 values of $\theta$ which correspond to the point $C$ (the origin) for $0 \leq \theta \leq \pi$. Then, determine the interval within $[0,2 \pi]$ for which $\theta$ traces out the dashed loops in the graph above. (Hint: $\cos \frac{2 \pi}{3}=\cos \frac{4 \pi}{3}=-\frac{1}{2}$ )
$\theta=$ $\qquad$
Interval giving $\theta$-values that trace out the dashed loops: $\qquad$
7. (continued) Here is a reproduction of the graph from the previous page of the polar equation $r=\cos (3 \theta)+\frac{1}{2}$ :

c. [4 points] Write, but do not evaluate, an expression involving one or more integrals that gives the total perimeter of the fan blades, including both the inner and outer edges of the fan blades.

Total Perimeter $=$ $\qquad$
d. [4 points] Write, but do not evaluate, an expression giving the total area of all 3 fan blades (the shaded region of the graph). (Hint: Your answer from (b) may be handy, but is not strictly necessary)
$\qquad$
7. [15 points] Nat is sailing a boat in a lake, with the path given by the following polar graph.

a. [4 points] What are all the angles $\theta$, with $0 \leq \theta \leq 2 \pi$, for which the graph passes through the origin?
b. [4 points] Write down, but do not evaluate, one or more integral(s) that gives the arc length of the larger horizontal figure 8 from the path above, as given in the following graph.

c. [5 points] Another boat is travelling around the unit circle $r=1$, given by the dashed curve in the graph below. Write down, but do not evaluate, one or more integral(s) that gives the area of the shaded region, as shown below.

d. [2 points] Give an interval of $\theta$-values for which the polar equation $r=4 \cos ^{2} \theta-1$ traces out the upper loop of the smaller figure 8 as shown below.

2. [9 points] Scientists are studying the bite of several different rodents. To do this, they give a wafer cookie to the animal, and take it away after the animal takes one bite.

- $r$ is measured in inches
- The wafer is modeled by the region inside the polar curve

$$
r=\frac{2}{5}
$$

(the solid line in the diagram).

- The rodent's bite is modeled by the region inside the polar curve

$$
r=\frac{1}{2-\sin (\theta)}
$$

and inside the wafer (the dashed line in the diagram).

- The wafer remaining after the bite is
 shaded in the diagram.
a. [3 points] For what values of $\theta$ between 0 and $2 \pi$ does the rodent's bite meet the edge of the wafer? Justify your answer algebraically, and give your answers in exact form.

## Answer:

$\qquad$
b. [3 points] Write, but do not evaluate, an expression involving one or more integrals that gives the area, in square inches, of the wafer remaining after the bite.

## Answer:

$\qquad$
c. [3 points] The bite mark in the wafer is represented by the thick dashed line in the diagram. Write, but do not evaluate, an expression involving one or more integrals that gives the length, in inches, of this bite mark.

## Answer:

$\qquad$
