

4. [10 points] In the picture below, there are two circles of radius 1 and 2 centered at the origin. The point A has coordinates $(0, 2)$. The point B is the intersection of the line passing through the point $(0, 0)$ and P . The angle θ formed by the line joining $(0, 0)$ and the point B with the positive side of the x -axis is measured in **radians**.

Find a formula for the following quantities. Your answers may depend on the angle θ , but not on any of the constants a , b , c or d .

- a) Let $B = (a, b)$.

Find $b =$ _____

- b) Let $P = (c, d)$.

Find $c =$ _____

- c) Find the length of the arc defined by the points A and B (the arc is shown in bold in the figure above).

Length of the arc = _____

- d) The point C has coordinates $(3, b)$. Find the length of the line segment BC .

Length = _____
